

Valeo Thermal Systems
Auburn Hills, Michigan

A 120,000 s.f. research and development North American headquarters facility for automotive engine cooling and A/C systems. The progressive building design includes a full height exterior glass curtain-wall system with matching interior glass partitions allowing full view between the two-story office and lab areas. The labs consist of multiple vibration shakers on a reaction mass, vehicle environmental chambers, a full anechoic sound chamber, and chemical/corrosion metal laboratories.
